

ABSTRACT OF THE DISCLOSURE

A liquid crystal display (LCD) device comprises a first substrate having a cholesteric liquid crystal (CLC) color filter, a second substrate having a thin film transistor, a seal pattern formed on one of the first and second substrates, a first electrode on the cholesteric liquid crystal (CLC) color filter, the first electrode being overlapped with a portion of the seal pattern, a second electrode on the second substrate, and a liquid crystal layer between the first and second electrodes.
